

## MAINTENANCE INSTRUCTIONS

### SupraTile

Supratile is manufactured from an easy to maintain PVC polymer compound and can be cleaned with any common household cleaners. Do NOT use any cleaner with abrasives (like Comet or Soft Scrub), or products that contains bleach.

Cleaners that have worked will are Simple Green, Spic & Span, and Purple Power amongst many others. We do not recommend waxing the tiles. A stiff bristle type broom also works very well to remove dirt and such from the tiles.

For areas that are harder to maintain we offer a clear protective topcoat which is a special urethane that makes them easier to keep clean. The urethane, being a coating, will need to be re-applied from time to time based upon usage and care.
